Abstract:

This work is devoted to the practical application of software implementation of the method of conjugate sinusoidal modes for the study of microstructured waveguides and a model of a weakly directing fiber, in order to verify its operability and identify restrictions on the application.

Keywords: conjugate sinusoidal modes, waveguide, weakly directing fiber

Acknowledgments: This work was supported by the Russian-American program “Basic Research and Higher Education” (BRHE), as well as by the presidential grant of the Russian Federation NSh-1007.2003.
